INTERNETWORKING LAB

Our advanced internetworking lab is a fully-equipped, state-of-the-art facility for equipment testing and verification. With 24 infrastructure racks, 80kW UPS backup, temperature and humidity control, and over 1200 Cat6 and 1200 single and multi-mode fiber terminations, we have the entire infrastructure necessary to deploy complex test scenarios.

We routinely work with major router and switch vendors, service providers, and test equipment vendors to provide tailored solutions for specific challenges. Our lab hosts a wide variety of equipment which is available and preconfigured for use in test procedures, and we can obtain what you need if it isn't already here.
